LINQ and Entity Developer components are freely distributed and can be used within applications developed by the users. At some point or other, every developer needs to, or should, work on projects where the language used is not his native one. This is particularly true when the Delphi language is chosen, as many developers find their initial experience with the language to be challenging. In Delphi, work with databases is more complex than in other languages, such as C#, especially when it comes to dealing with the details of databases and database objects. For this reason, if you want to work more efficiently with databases, it is always advisable to use an integrated development environment that supports database access for the Delphi language. If you are looking for something more powerful and more suitable for your needs, we recommend EntityDAC. EntityDAC offers a very user-friendly and reliable environment that allows you to map your database tables to Delphi classes. In the rest of the post, you will learn all about EntityDAC, the pros and cons, as well as common and more advanced features of the Delphi ORM solution.
