The MONODrum! plugin is a take on an old "boss" drum machine from the late 90s which has an abundance of great features, a single 8 voice synth, stereo busses, high quality samples, the ability to add bonus channels in your DAW and many more. It also supports MIDI Learn. The MONODrum is a complete and total drum machine package that will give you instant access to the unique drum sounds and features that were only available in the very expensive "boss" drum machines. Create your own unique sounds of real drums or add bass, chords, string sections or whatever you want to add to your mix by simply adding or subtracting sounds from a bank. Now including the ability to add a realtime synth, click and drag to play, instant note bending, 16 note arpeggiator, trigger patterns, arpeggiators, vocal effects, so much more!

A Complete and Complete Drum Kit! Drums - Combinations of numerous effects, verses and hi-hats Hi-hats - Many effects including lo-fi, tape saturation, phaser, flange, looped hats and more Bass - Many variations with varying effects including LPFs, distortion, delays, repetition, harmonics Chords - Creating a sequence of notes with chords Synth - The only realtime synth available! Arpeggio - A very simple arpeggiator Patterns - A comprehensive library of patterns! Patterns can be triggered with Hold, Aftertouch, Velocity and Pitch Wheel. There are also individual drum hits that can be played together in a pattern! Patterns can be created with standard MIDI patterns or from the hitlist which makes it possible to use your own rhythms as patterns with the purpose to save you time and start using a pattern right away! Cracked Minimal With Keygen is a minimal groovebox drum machine. The rhythm is produced on the "kick" slider and the bassline on the "Bass" slider. Sliders have jacks so you can connect other effects to the signal. The key R&D part of the product is the Wavetable oscillator. This can be used to make samples when you play the Minimal keyboard. All the parts of this plugin can be effectively mixed using a MIDI keyboard or sequencer. Minimal has a built-in synth and a simple MIDI sequencer. Pre-

release v1.0 available. Minimal Limitations: Minimal isn't meant to be the center of your mix. This product was designed to be a beat machine. To get something a little more mix-friendly, I've uploaded a Soundfont Wavetable Oscillator, that adds a wavetable bassline to the track. Hopefully this will help you remix this into something you enjoy. The Minimal plugin is intended to be used as a groovebox and drum machine. Hence it's Bass and Kick sliders only, no Pitch or Tempo controls. Minimal Description: Minimal is a minimal groovebox drum machine. Minimal

Minimal is a drum machine that simulates some of the sound of a familiar drum machine, but with nearly no footprint – just a collection of individual drum voices and a bass synth. You choose which individual drum sounds you want and use them in combination with on-screen pads, and up to 32 sequences are housed in the drum patterns. There are also several bass synth patches to choose from. The core of Minimal is built around the concept of simplicity: an easy to use sequencer, a streamlined workflow and friendly layout. Mindful of limitations in the machine's tiny footprint, the sound engine is highly controlled to give you just the right amount of complexity and control over each step of the rhythm pattern. The layout of the sequencer is designed to put all the key sounds of Minimal in front of you, making it easy to tweak and edit the kick, snare, claps and more. Minimal has a built-in looper that lets you record up to 16 sequences to play back as a loop. You can also use the looper to set in-composer tape speed for a unique style of sampling. Minimal has an onboard bass synth with an intuitive user interface. You can use the synth to create a rhythmic bassline that fits perfectly inside a pop, jazz or house song. When playing, the synth's settings are shown at the bottom of the screen. You can also use the onboard bass synth to create a more innovative bassline in a bigger, fuller and more dynamic style by plugging out from Minimal to create your own song, then back into Minimal to finish the beat. Minimal lets you copy and paste patterns on the fly. You can also use the autobass feature to start a bass synth automatically. You can start from a clean slate by using the factory preset pattern. Over 40 drum sounds Nu Disco sound Drum synth All of Minimal's sounds can be tweaked and edited by adjusting the pitch, energy and velocity of the sounds individually. You can add more Minimal sounds to your kits by downloading the Minimal Expansion Kit. Each Minimal sound includes 2 to 10 versions of the same drum to make it easy to adjust the kick, claps, hats, snare and tom sounds to your liking. All the sounds are a mix of high-resolution sample files with high-quality versions created from

Introduction Here is part two of my TeknoSonic Tone modules series! in this part we will be using the Tone(2) Bass synth and Synthesizer Module. In this project we will be building a Bass Pedal Synthesizer from scratch. We will use a Tone(2) Bass synth to add low end and a Noise channel to add overdrive. This will be a rather simple project and we will be able to get up and running in less than 30 minutes! In this project we will be building a Tone(2) Bass synth using the Tone(2) Bass synth module and Noise channel module. We will be building a custom mixer using the S&H custom mixer kit. The mixer will be able to control the Tone(2) Bass synth and Synthesizer module. The Tone(2) Bass synth works very well with the Noise channel module as it is designed to enhance each other. The Noise channel module adds overdrive to the Tone(2) synth which makes it much more enjoyable to use.

Introduction In this project we will be combining the XCel Module with the Tone(2) Bass module to make a sound mixer with overdrive ability! In this project we will be combining the XCel module with the Tone(2) Bass synth module to make a sound mixer with overdrive ability. Introduction Here is another one of my TeknoSonic Tone modules series! in this project we will be using the Noise channel and Neutral channel from the Tone(2) module and the Tone(2) Bass synth module to make a Distortion Unit.
