Last week, Microsoft announced that it was preparing a 20th Anniversary Edition of Windows XP on April 8, 2007. They also announced that it will be shipped with SP1 enabled and that it will support 64-bit OS (x64). This is a good news and a crucial event for Windows users. For many years, there had been no new versions of Windows XP after SP1 (May 2004) and then x64 edition (Jan. 2005). If you insist on doing that, you will need to buy the same system as many times. Have a backup of your existing Windows XP installation. The backup solution must work even when XP itself is on the secondary disk. Recreate a new Windows XP installation, using the same version of Windows XP you are planning to upgrade to. 1. Plan your backup: - I'd recommend that you use either the same installation media with the backup, or use a different media to create the backup. It's not necessary to have the same version of XP for the backup. - Use Windows XP Ultimate SP2 or later. It's better to backup media and not user profile. - Create the backup as soon as possible. You don't know how long the backup media and the backup media are going to be available. - To a clean installation of your computer, use a different partition. It's better to create a new partition for the backup, especially if the backup partition is an extended partition. 2. Create a new installation of Windows XP: - If you have a standard installation media (Cd or 09e8f5149f
