March 4, 2012 - Project64k v0.36 core 1.4 base 0.13 is released. Project64k is a version of the Project64 emulator that supports multiplayer games using .pkg files, but with lower resource requirements than the Project64v version. The project was first presented in December 2010 at CES Asia 2010. Project64k uses an operating system emulator from Microsoft - Win64 and an open source operating system from Google - KDE (GNOME). The emulator does not require your applications to be natively compiled for ARM, as they just run on an ARM VM.
