## AVCHD Manager Crack+

This is a small tool for managing your folder of AVCHD files on an external hard disk (USB not included). The program was designed to be as small as possible, with as few features as possible. This is why it doesn't contain a file browser or the ability to copy files between folders, or to browse hard disks. It is only designed for managing AVCHD folder. Supported Features:  
Display files  
Manage files  
Copy files  
Move files  
Rename files  
File type  
Videocontrol-PS3 basic  
Videocontrol-PS3 advanced  
QTasm

---

(requires plugin) Version1.5: Added support for QTasm's new create frame, delete frame, create video frame and delete video frame. Version1.4: Adjusted the program's size (menu items are now on the same line) Version1.3: Added a patch so that a video menu-item can be enabled/disabled (though it may not work for all menu items) Version1.2: Added a setting to easily switch back to the old user interface Version1.1: Added a new loading screen Fixed an issue where the movies displayed as "unknown format" sometimes Version1.0: Initial release! Notes: There is no warranty of any kind

on this program, so you do it at your own risk. I take no responsibility for anything that happens to your collection. This is a very small program, so it may not work for all people. You should read this section before downloading and using the program: AVCHD Manager is a multi-platform standalone application. However, the only platform that AVCHD Manager is currently supported is the PS3. AVCHD Manager works with the PS3 without any drivers (the PS3 is USB-based). AVCHD Manager is a standalone application. Therefore, when you run it, there is nothing to install. The application is self-

---

contained and only needs to be run from inside the AVCHD Manager directory on your hard disk. AVCHD Manager is a small program. It shouldn't be so small that you cannot use it. Therefore, there are no tutorial screens or instructions. Any problems should be addressed to me on the AVCHD Manager support section. What's new in version 1.

#### **What's New In AVCHD Manager?**

The AVCHD Manager is a small application that has three main functions. (1) Create and delete folders. When you create a new folder, it will be copied to the

---

external hard disk. The application also has an option to create a folder on the external hard disk that is located at the specified location, but with a randomly generated name. (2) Importing from hard disk. Importing from disk is very simple. Simply right click on a folder in the application, select the "Import Folder" option and the folder on your external hard drive will be used as the folder. (3) Rename folders. Renaming folders is very simple too. Simply hold down the "Shift" key and use the arrow keys to move the folder name around. Once you are happy with the name, press the "Create" button.

---

While the application is not intended to be a replacement for other AVCHD authoring tools, as it is only intended for use on a FAT32 drive, it does include one such tool. By pressing the "Create.mkv Container" button, you will be prompted to select the "Create Container" option from the "Build Folders/Containers" menu. By selecting that option, the application will use the `mkvtoolnix-gui -v2` to convert the selected folder, and will create a folder with the same name and path as the folder that you are selecting. Another interesting function is the ability to batch move folders. By right clicking on a folder, selecting

---

the "Move Folder..." option, and holding down the "Shift" key, you will be prompted to select the "Move All..." option. This will batch move all folders, selected in the application. Note that there are two different methods that are used to move folders, but there is a simple and unobtrusive way to select which method you want the app to use. If you select the "Use Container" option, the application will use the `mkvtoolnix-gui -v2` to move the selected folders, the container, or move all, as selected. If you select "Move Folder" it will use the same method as the built in Sony menu. Folders that are added or deleted from the external

---

hard drive are automatically re-mounted. This is so that you don't have to manually mount the folders. However, if you do happen to lose access to a folder on the external drive, simply delete the folder or
