That we just import a view or inetl-view from xml, and it's all. But if your app is for multiple devices, say you are making an app for iphone, blackberry, galaxy etc, you end up creating your own xml files and code. I was wondering is there are a way to get this work done from a single application? So if I have an android device on which I am developing and if I want this same app to work for blackberry's also, is there is any way in android in which we can have same codebase for all devices we develop on? A: You can use the "base" theme. You can use predefined "base" themes like those provided here [Evaluation of results of surgery for nephrolithiasis using various methods]. The results of treatment of 209 patients with different kinds of kidney stone by extracorporeal lithotripsy and endourological operations in 1993-1995 in Silesian Centre of Urology were evaluated. Although treatment by extracorporeal lithotripsy, computerized and surgical lithotripsy were successful in 50 to 83% of the patients, most cases of kidney stones (62 to 90%) required surgical intervention. At the end of the study period we observed 49 of 50 patients after extracorporeal lithotripsy and endourological surgery, and 43 out of 50 e79caf774b
