ObjectARX is the base class library, that all AutoCAD products based on the ObjectARX libraries use. This allows AutoCAD to use the same code base across all its products, including the standalone AutoCAD editor. ObjectARX code is used in software such as AutoCAD itself, as well as third-party products such as the VTXBuilder (a program for creating models, animations and other 3D objects in 3ds Max.) and Blender (an open source 3D modeling, animation, rendering and rendering integration application.) There are three main ObjectARX products that integrate into the AutoCAD editor: AutoCAD Architecture. Integrates with ObjectARX Design. AutoCAD Electrical. Integrates with ObjectARX Building. AutoCAD Civil 3D. Integrates with ObjectARX 3D Landscape. Code examples The majority of the applications programming interface (API) code samples are available from the AutoCAD Exchange Web Service. Although they are not officially supported by AutoCAD they are useful in exploring AutoCAD's object-oriented programming environment. Autodesk Exchange Apps Autodesk Exchange Apps is a collection of solutions from the AutoCAD application store that allow users to access additional features and functionality when using AutoCAD. Solutions include: Document and software monitoring - monitors AutoCAD activity to provide information on what is happening to your CAD files, including how many times CAD files have been opened and saved, the change history of CAD files and much more. This tool can provide a lot of useful information and is a very useful tool for technical support and system administrators. Support and collaboration tools - allows users to track and monitor support tickets and other communications, including AutoCAD chat rooms and discussions. Document and software management tools - gives the ability to effectively manage files and records, allowing users to control and manipulate users, groups and user permissions on CAD documents. Corporate document protection - allows users to restrict access to

CAD files and read-only documents, providing extra protection for important and confidential documents. Concerned about the future of coal? We are too, but we have a plan. Deep down, most of us (yes, you too) know that coal's days are numbered. There are three reasons why: Cleaner air and water are not free; our cities are getting hotter; and the lights are going out. For the past 15 years, the Government has been trying to encourage the Australian coal industry to "green" up. In 2009, the Clean Energy Future plan promised massive government support for renewable energy to replace coal by 2020. In April 2011, the Harper Government adopted the United Nations Climate Change Conference (COP15) Copenhagen Accord. The Harper Government adopted the Climate Change Action Plan 2012. The scheme is well thought out. It includes a number of policies designed to encourage renewable energy in particular. In addition, government agencies like the Australian Renewable Energy Agency (ARENA) and the Clean Energy Finance Corporation (CEFC) are actively working to provide a broader economic incentive. There is good reason to be optimistic that these policies will help Australia become a renewable energy powerhouse by 2020. We are on target. In May 2012, the CEFC announced it would provide \$100 million in concessional loans and equity stakes to a group of 50 new companies called the Energy Innovation Hub (EIH). One of these companies is AGL Energy, which in May 2012 announced that it had been chosen to develop two solar photovoltaic (PV) solar farms in the southern states of Victoria and South Australia. These PV solar farms will be the first to come on line in 2013 and will be funded with \$200 million of loans and equity raised from ARENA and CEFC. This means
