For example: I am serving the website to https and the user would see "Secure connection" then and no message would be displayed when the website is loaded without https. I tried doing it with activeX but the problem with ActiveX is that even if the browser isn't displaying the "Secure connection" message, an exception is being thrown which might lead to a hard crash of the

application. A: Try this JS to check the protocol status: if
(location.protocol === "https:"){ //secure connection } Q: How to
create Json Dictionary from 2/3 columns? I have this csv file: A B C D E
