Version 1.3.0 of the program requires 894 MB on your computer. The *Plantago* species, commonly known as plantain, plantain-leaf and field-speedwell, are perennial herbs that occur in North America, Europe, Asia, the Mediterranean region, Africa and Australia. *Plantago* is a Latin word meaning "plantain" and refers to the shape of the leaves. The

genus name is derived from the Greek word "planta" which means "plant." It is a commonly used name for pharmaceuticals. Plantago species are used as herbal medicines and folk remedies and are employed in homeopathic preparations. There are about 200 species of Plantago in the world and in the United States there are approximately 20 species of plantain (see *Plantago major*). Most have very small, grey, woolly flowers and umbels of

terminal, flat, pointed, spiny bracts in close head. The leaves of most of the species are oval in shape. The leaves usually have crenate teeth but they can also be smooth-edged or sharply serrated.

The leaf margin is usually rounded to heart-shaped, but it can also be distinctly notched or even serrated.

The leaves in all species are vernally contracted, and their vernal growth is usually absent. Many have two or more pairs of leaves that are

deeply crenate. The genus comprises more than 250 species, some of which are often locally common. Within the genus *Plantago* there are subgenera *Echinopsis* (7 species), *Draco* (110 species), *Greenia* (25 species), *Leucogalmoides* (3 species), *Mertensiana* (1 species), *Plantaginis* (80 species), *Plattia* (7 species), *Pulsatilla* (5 species) and *Rhinanthus* (5 species). The Botanical Gazette states that the genus *Plantago* includes about 200

species. *Plantago* comprises a series of Mexican species that are not native to the United States. To illustrate, *Plantago discoidea* A. Gray, is a Mexican species that occurs in the Sonoran region of Mexico and is cultivated as a garden plant in the United States. It is the type species of the genus *Plantago*. According to the internal transcribed spacer (ITS) phylogeny, *Plantago discoidea* is a sister species to *Plantago umbellata* Mill.

(Plantago subgenus Mertensiana). The Ancient Plant Conservancy has placed c6a93da74d
