what if you've already downloaded one of those files, but want to replace it with a different version? that's what it's for. the v-ray materials editor lets you re-import any material from any vray file. just right-click on the material in your material list, and choose "re-import from file". you can use vray material files in a variety of ways. some techniques, like creating new materials from

scratch, are covered in the next tutorials. some material files are created specifically for specific applications. for example, there are some high-resolution diffuse color maps for blender. the real power of vray materials comes when you can use them as building blocks to create custom materials. to do that, you will need to use a texture library that contains your own assets for creating materials. there's a lot to explore in the v-ray materials library. this library is organized into "collections" of materials to help you locate the material you're looking for quickly. you'll also see how easy it is to import assets from online sources, and how easy it is to re-import assets from other v-ray files. the other great thing about v-ray materials is that they're created by professionals for professionals. and that's reflected in their quality. because it's designed by professionals, the v-ray materials library is organized into collections of materials to help you locate the material you're looking for quickly. every material is customizable, and the v-ray materials editor lets you do that in a snap. for best results, use the "add to library" button to add material to the library, then use the context menu or the "drop materials from chaos" button to add these materials to the v-ray "drop box" (visible in

the rhino perspective). 1) unzipping: the files inside the "zipped" archive contain the.mat/.max files you need to process. you will need a tool like winrar, 7zip, or something similar to unzip them.2) choosing the right target folder: using the tool's context menu, choose the target folder where you want the mat/max files to end up. you will need to change the pathing on the assets in your v-ray materials library, such as changing the "file path" in the rhino perspective to point to the newly unzipped material files. this will ensure that you keep your materials as you process them. 3) checking for updates: when the chaos material library first opens, it checks to see if any new materials have been released. if a new file has been released for any of the materials in your library, then the tool will update the library and ask you if you want to download the new version or continue using the version on your disk. if you choose "continue using the version on your disk", then you will not need to download the new files. 5ec8ef588b
