

after that you can use disk manager 10 to set up dynamic disk libraries, which is just as easy as setting up a dynamic hard drive overlay. just set a partition up front using an older version of disk manager. download ontrack disk manager 10.46 iso you'll have disk manager 10 available, which makes dynamic disk overlays work. type partition(n,r,r,r) i think the module ifs.mod needs to be preloaded with the iso bootable boot.inf. do you want me to upload it to a virtual drive on the site?you need to change the windows boot.ini so that the module ifs.mod is loaded. click the start button and typeregedit and then navigate to hkey_local_machine/system/bootsystemdatabase and there you'll see3dof3d. use the reg_sz type (in other words, a string in quotes, preferably empty) andset the value to 3dof3d. if you want, right-click on the value and set its data valuet to true. i suggest using the reg_dword type, but that's not mandatory. remember, this is a purely cosmetic setting. deleting it will have no effect. all that's left to do is to point the windows boot loader to the ifs.mod file.
