The difference I've experienced in using Photoshop on my iPad Pro has been remarkable. It makes my old Mac notebook days of using Photoshop on a small 11-inch display seem downright antiquated by comparison. The toolset feels remarkably complete and powerful, and the new features fixed, I hope, any remaining issues. This is a lot like Photoshop on the iPad Pro, and that's a good thing. Photoshop CC 2018 feels like a cohesive enhancement of the software, and you don't have to sacrifice a thing in the process. Most performance issues have been addressed by the developers with this release, reducing how slow this program can run in some situations. Also, the new Performance panel gives you a lot of vital information about current performance, including how busy your machine is, how many times you're switching back and forth to the Editor, and proprietary information like how many effectors you have running. I like this panel and write more about it in my performance analyses. I am very happy and impressed with the new and improved performance! I have been uploading my images on a brand new MacBook Pro Late 2013 and compared with my MacBook Pro Early 2011, this is a major improvement. Another good version. I am using Lightroom 5.2.1 and Photoshop CC 2015.0.0.3874 (64-bit & optimized for Intel 64bit architecture), and I haven't experienced any weird performances, glitches or anything like that. A small bug here and there, but nothing major.
The only gripe I have is that I was hoping that the mapping WYSIWYG trend would finally end here :)

Stay out of Photoshop's way with the new Shape Layers feature, which allows you to create a second layer beneath your current image that will keep your content safe. Photoshop expert staffers list the screen capture tool, which offers access to a variety of documents, web pages, PDF files, spreadsheets, and more. Take a screen recording and trim it to the desired time length or seconds, then edit out unwanted elements and/or messes before sharing your masterpiece through a variety of platforms. From Twitter to YouTube and Facebook, this tool saves a lot of time and effort, and is a must-have tool for creating content.
